R-A: Attempt 2
Round A — Host + 1 guest

PORT=4183 ARENA_ENABLED=true npm run arena:dev

cd /Users/justinzero/orbacetech/DevProjects/os-twitcharena

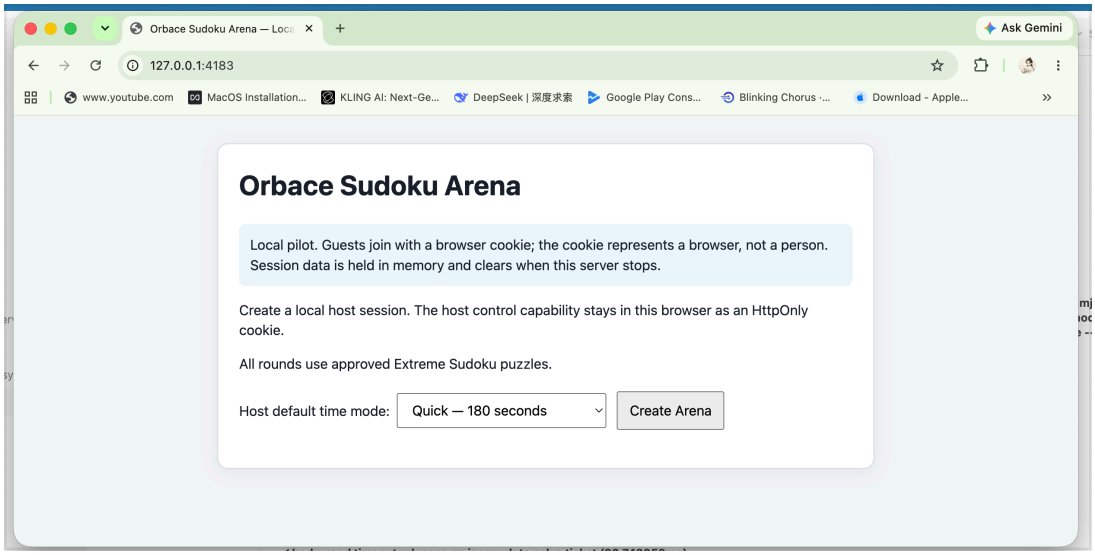

npm ci
npm run check
npm test

ARENA_ENABLED=true npm run arena:dev

Attempt 2

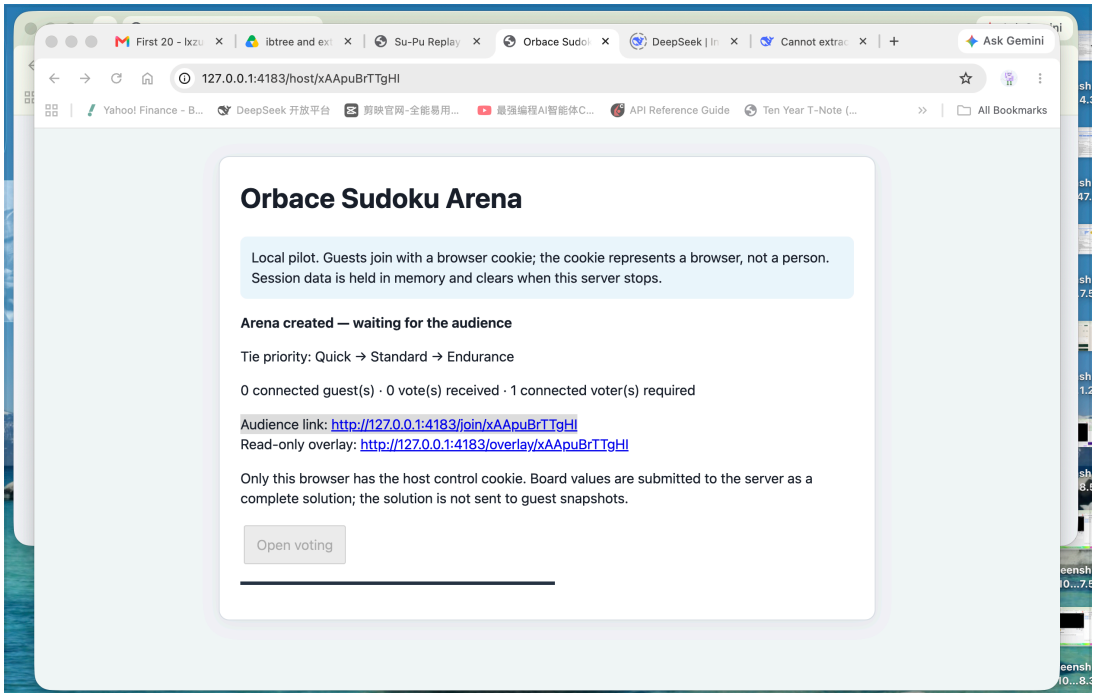

1. Host opens `http://127.0.0.1:4183`, creates an Arena and copies the audience link. The session starts in CREATED and has no running ballot.
2. Guest opens that link in a separate browser profile or private window. Confirm the guest sees "You joined the crowd" and the host sees one connected guest and zero votes. Presence counts browser sessions seen in the last 15 seconds, not verified people.
3. Host selects **Open voting. Guest and host see VOTING and the countdown. The guest votes for a time mode; all modes use approved Extreme puzzles. The ballot remains open for 20 seconds from the host action. The guest can change the vote while it is open.**
4. After the ballot closes, confirm both see READY and the host sees one connected guest and one vote. Start remains disabled unless the configured number of currently connected guests have voted; the local default is one. The `ArenaStore` constructor supports `minParticipants` from 1 to 20 for local test configurations. If no connected guest voted, the host can reopen voting for a fresh full window. There is no test override.
5. Host starts and solves, or waits for the server deadline. Confirm the two windows display the same result. Rematch starts a new linked session with a fresh approved puzzle and a new lobby/ballot.
6. Record the observation and evidence in `docs/ARENA_ROUND_A_OBSERVATIONS.md`. **Do not proceed to Round B until the tester records a Round A pass. Stop the server with Ctrl-C.**

Step 1:

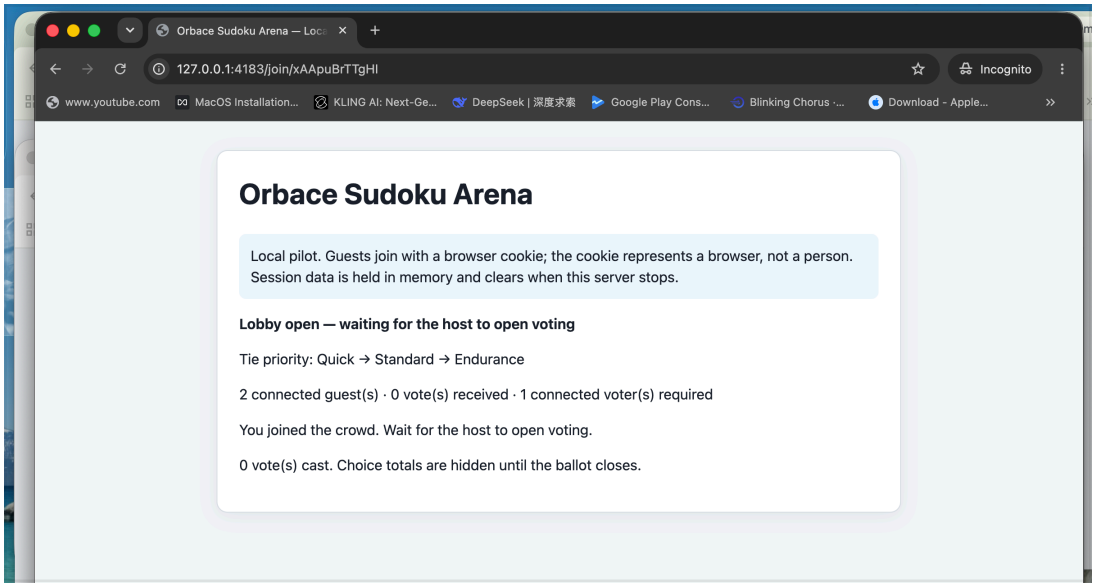

Step 2:

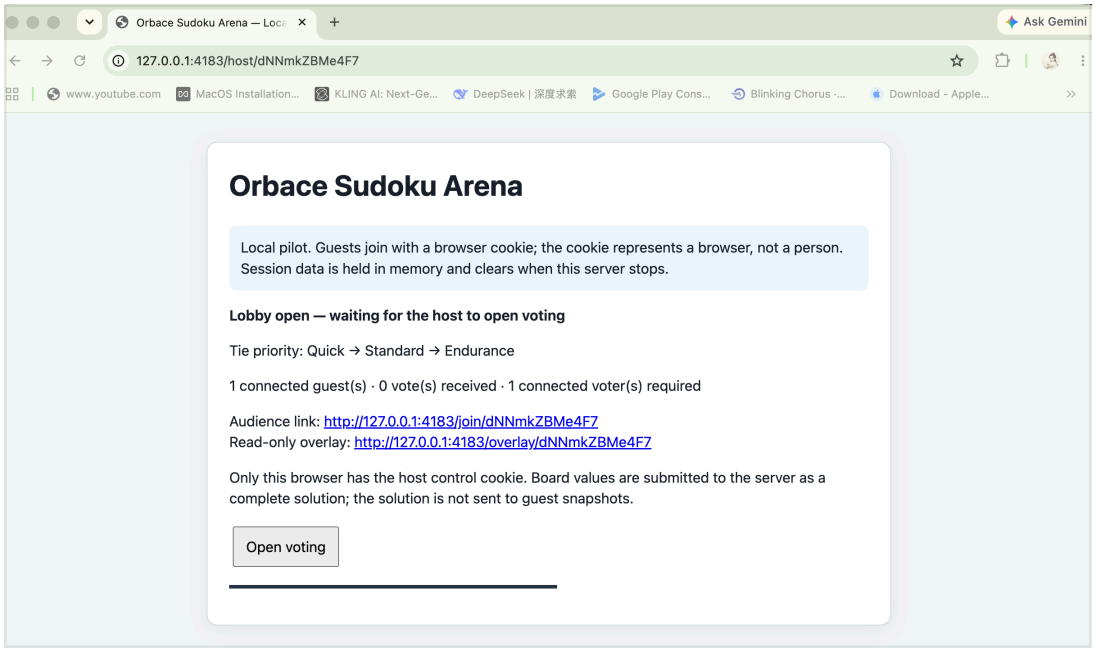

Audience link: http://127.0.0.1:4183/join/xAApuBrTTgHI

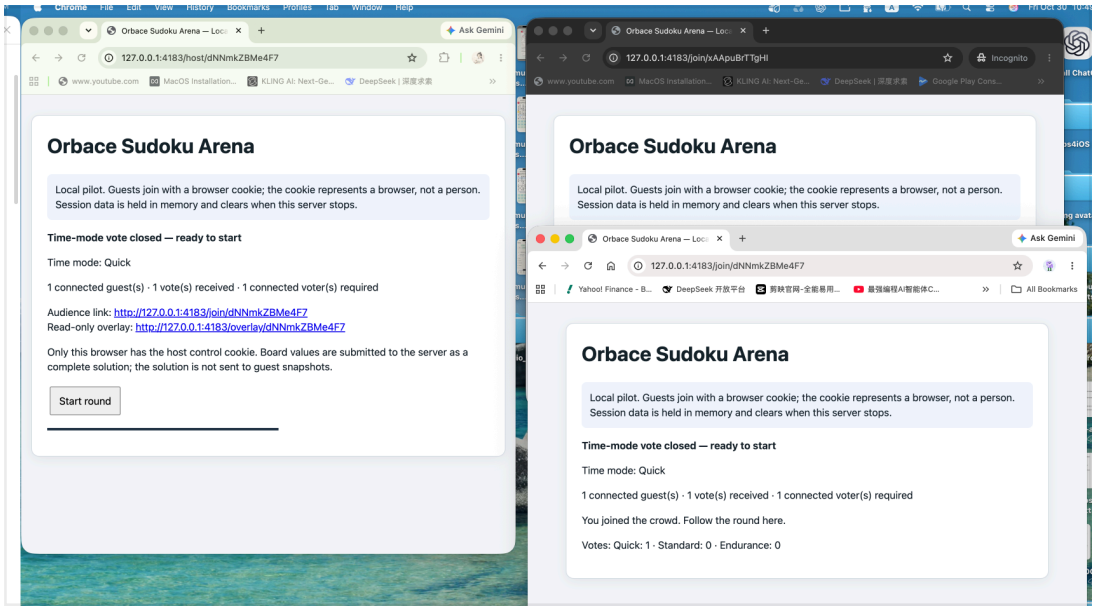

Step 3: open audience link

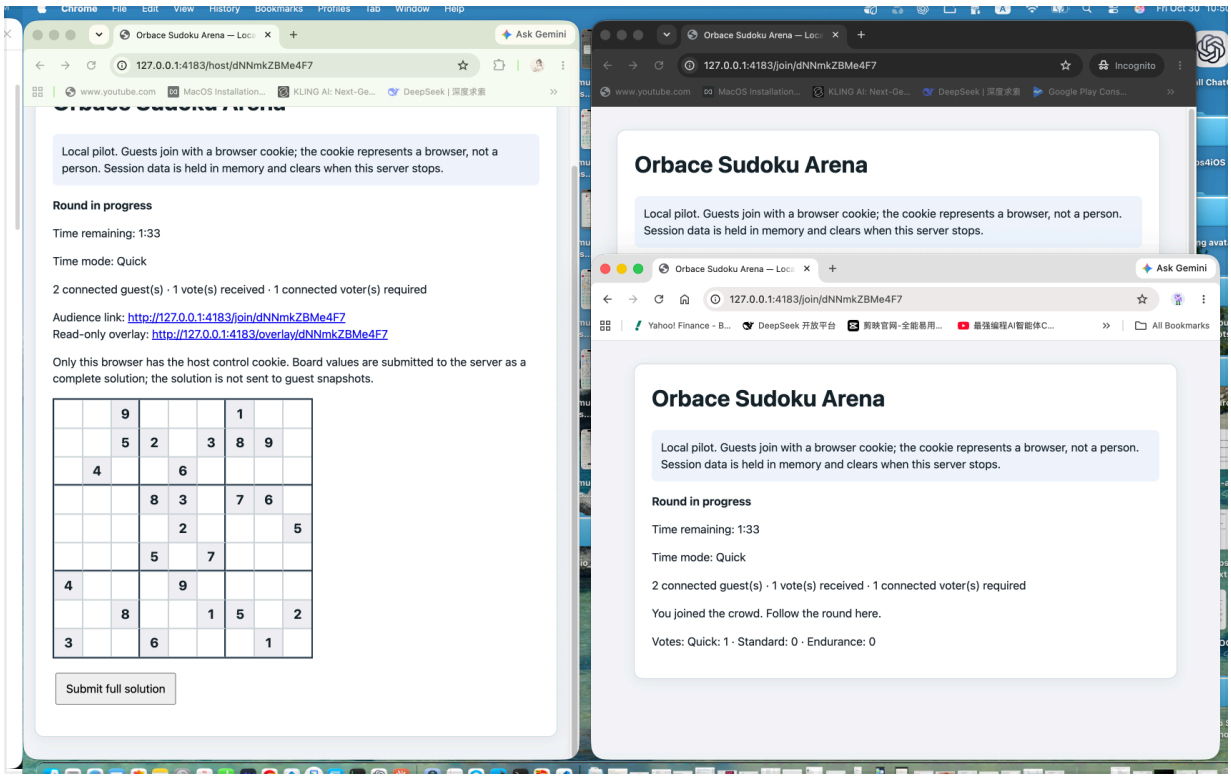

Step 4 open voting

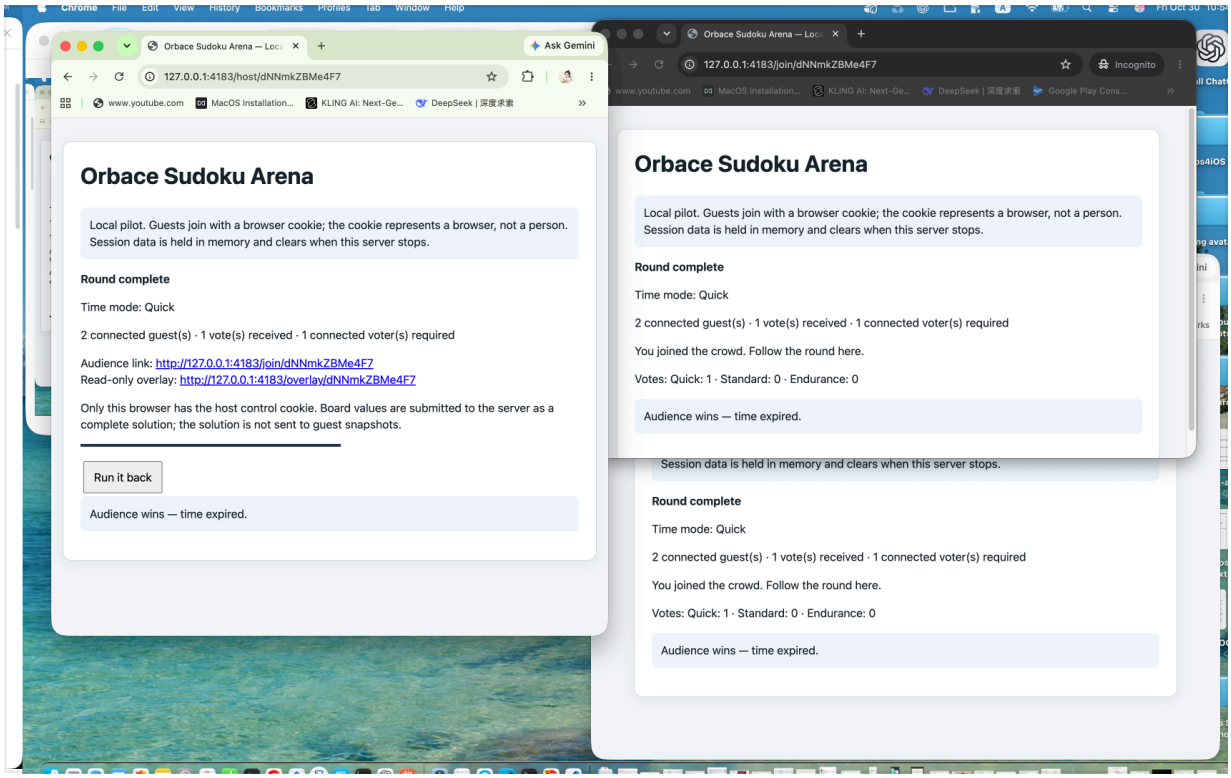

Cast voting

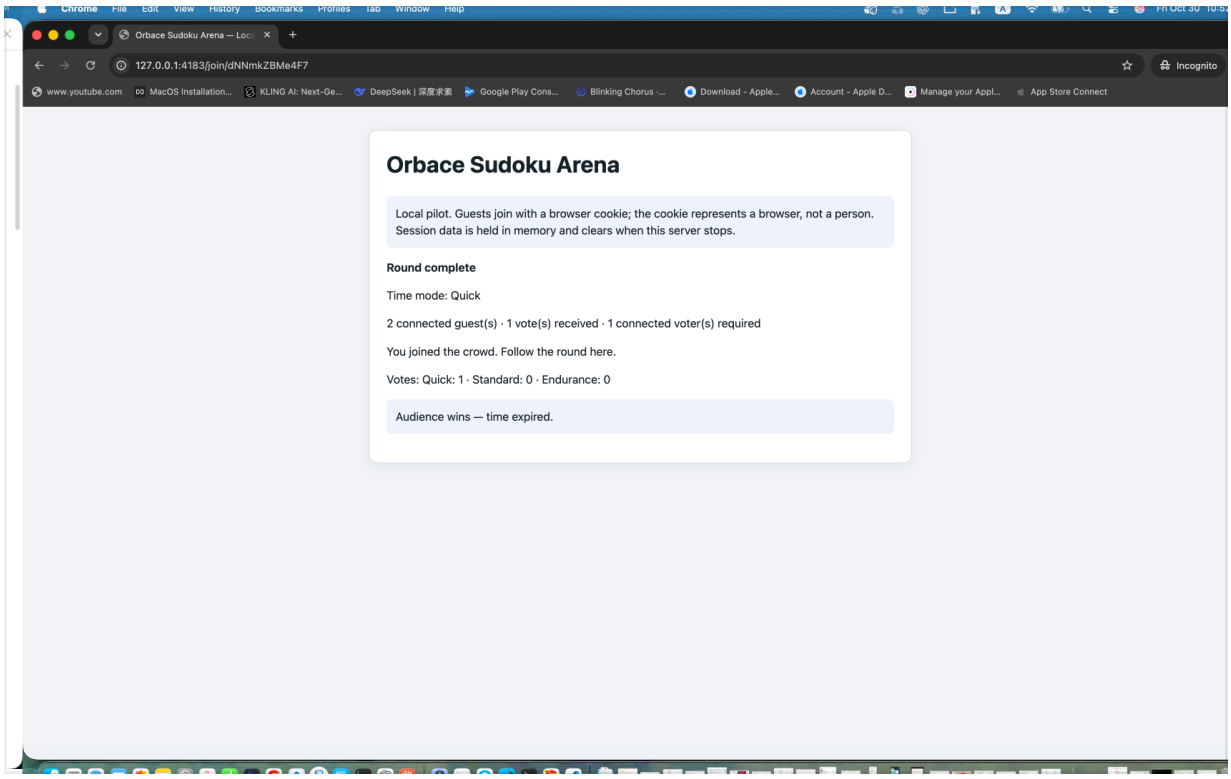

Start game

Round complete: all three windows shows audience wins

Attempt 1: Failed

1. Open Terminal in the project directory.

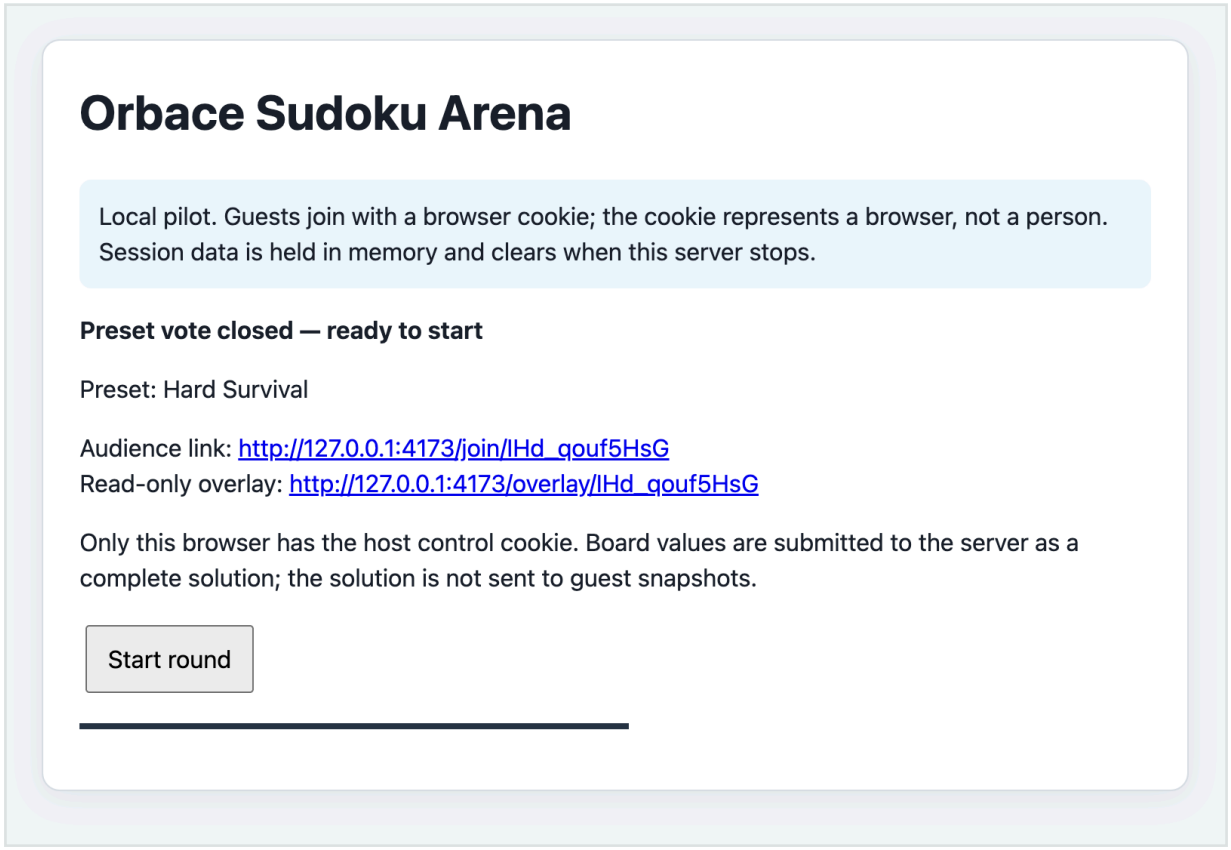

2. Start Arena:
   ARENA_ENABLED=true npm run arena:dev
3. Open http://127.0.0.1:4173.
4. Create a host session and copy the guest join link.
5. Open the link in an incognito window.
6. Guest votes for difficulty; wait 20 seconds. F
7. Host starts and solves the puzzle, or lets the timer expire.
8. Verify both windows display the same winner. F

Pass: One complete round with consistent results.

Step 3: issue: we have decided NOT to use easy, medium, hard but only the extreme

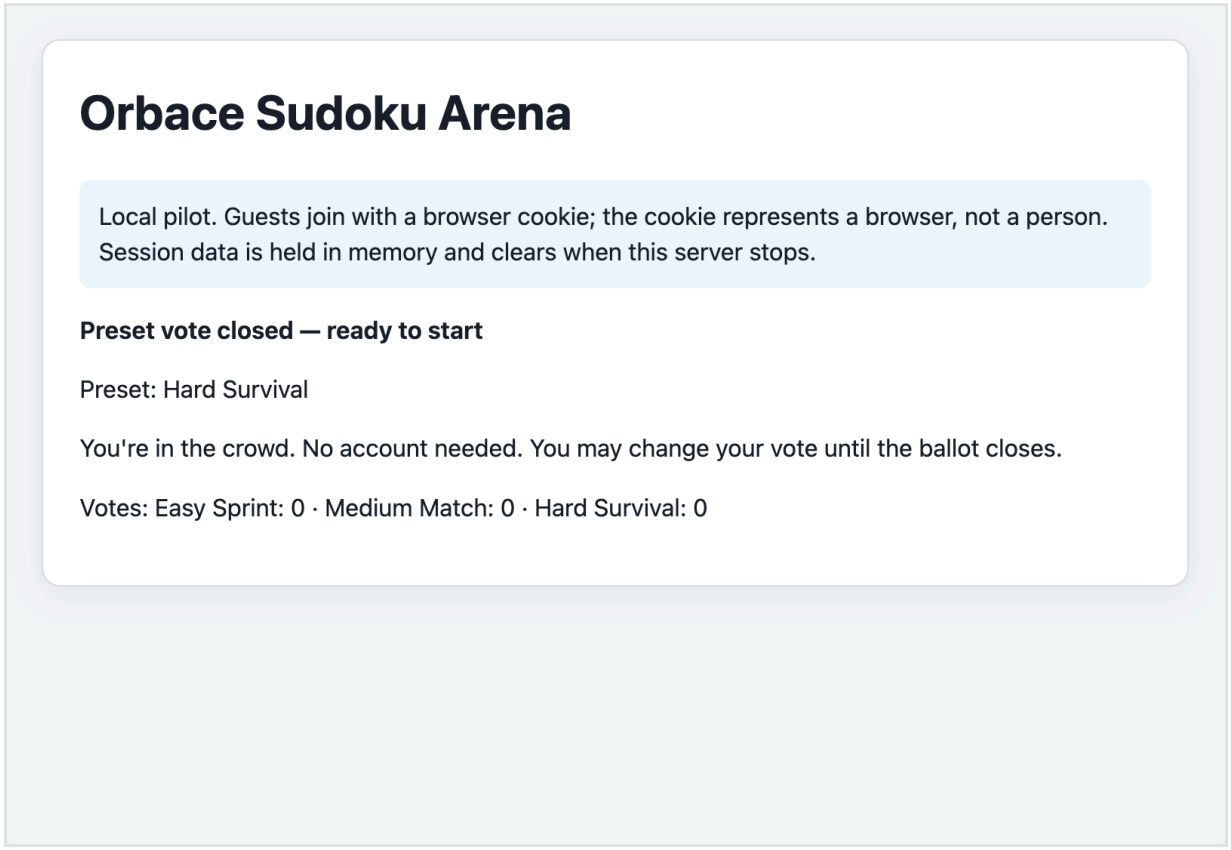

Step 4: created

Audience link: http://127.0.0.1:4173/join/lHd_qouf5HsG
Read-only overlay: http://127.0.0.1:4173/overlay/lHd_qouf5HsG

Step 5: How do I know I am in the crowd???

Step 6: there is no vote area

Step 7: game start without audience
